## Competence

archicult is a team of architects, interior designers, engineers and creatives. Every project we analyze from top to bottom and create individual concepts and solutions. Most important in this are the responsible and sensible processes when approaching a task. We create innovative, up to date and sustainable solutions while respecting the budget and time frames given.

## Philosophy

The world, the society, the technique and the communications are in constant, rapid change. This augments the importance of the cultural roots of the people. Our goal is to identify and understand the requirements of the people, and transform them with substantiated sustainability.

Going forward from this point of view, we do not understand our task as limited to simply building something. Architecture, as shaping the environment, is our inertest, in all its facetious forms and expressions.

And most important: We love what we do!!

## History

Founded 1995, the company evolved from a self-employed, single architect into thriving office with a staff of 12 and various interests.
